## CNC bending

IMPAS has two conventional machines and three CNC-driven machines for any CNC-bending job.

Drawings for the CNC-controlled bending machines are saved digitally. In this way, time and money can be saved on repeat orders.

We can bend pipes with diameters ranging from 5 up to 139,7 mm and a radius of  $R=2D$ .

The special measurements ( $\varnothing 25$ ,  $\varnothing 30$ ,  $\varnothing 38$ ,  $\varnothing 57$ ,  $\varnothing 76$ ,  $\varnothing 89$  and  $\varnothing 108$ ) for the bending of CuNiFer can be CNC-bended by IMPAS.
